Pot 1,5 l.	—	CONSULT

All our olive plants are produced by in vitro culture or micropropagation, which entails:

- Health guarantee
- Genetic traceability
- More efficient root system
- Larger leaf area
- More branched architecture and a more uniform spatial distribution
- In general terms, a superior agronomic yield

In addition, on demand, all our olive trees can be biotized to achieve optimal development in those environments that generate some type of biotic or abiotic stress to our plants.

Please, consult the different microorganisms that we use to biotize our olive trees and which would be the most appropriate for your case.

Argan

Genotypes

- ARV 11
- ARV 24
- ARV 31

Rootstocks

- ARP 32

Formats	Price
Pot	2,6€
Pot 9x9	3,2€
Pot 1,5 l.	3,9€

The plant materials offered are the result of the selection made by the Center for Soil Science and Applied Biology of Segura CEBAS in an agronomic test of argan plants from seeds of different origins.

Consult for other formats, species or varieties.

Terms of sale

Price and method of payment

- 10% VAT will be added to the prices.
- Payment, except by mutual prior agreement, and depending on the delivery system, will always be made by advance bank transfer, delivery of a bank check or cash payment.

Generalities

The transport of the merchandise is the responsibility of the buyer, except on those occasions when we can integrate the point of delivery in any of our routes.
